TX-SaaS-Enterprise-5520 SAAS CRM PROPOSAL - CLIENTCORE DYNAMICS ENTERPRISE**

Date: September 20, 2026

Project: 28-User Cloud CRM with Advanced Automation, CPQ & BESS-Style Retention Engine

Prepared For: Lone Star Property Management LLC

Client Profile: 32 employees, 480 rental units, projected growth to 650 units & 40 users within 24 months

PAGE 1: EXECUTIVE SUMMARY & SYSTEM TOPOLOGY

1.1 Project Introduction:

ClientCore Dynamics Enterprise is an extensible, enterprise-grade SMB CRM platform focused on complex operational workflows and long-term scalability. This proposal presents a high-yield architecture combining advanced workflow orchestration, native CPQ (Configure-Price-Quote), asset lifecycle management, and predictive retention analytics.

The platform is designed to unify sales, property operations, vendor management, and owner reporting while providing a 360-degree tenant lifecycle with integrated compliance safeguards. Hosted on Azure US-Central (SOC 2 Type II, ISO 27001, HIPAA-ready), with 99.95% uptime SLA, single-tenant DB option.

1.2 Technical Specifications:

- Total Platform Capacity: 28 users licensed with burst capacity to 40 users included (license pooling), 1,000,000 contact/account records limit, 2 TB pooled file & activity storage included.
- Platform Architecture: Single-tenant dedicated PostgreSQL with shared app tier, containerized microservices, GraphQL + REST API, enterprise-grade multi-layer caching (Redis).
- Core Modules Included: Contact, Account & Household Management (hierarchical), Advanced Pipeline (25 pipelines, unlimited stages), Asset & Property Registry (up to 2,000 assets), Work Order & Field Service Dispatch, Native CPQ with price books & product bundles, Advanced Reporting & BI with 60+ templates + custom report builder (SQL-based).
- Mounting / Deployment Structure: Combination of standard cloud UI plus low-code canvas app builder for custom portals (tenant portal, owner portal) - 2 portals included with 15-degree white-label theming.

PAGE 2: CUSTOMIZATION, AUTOMATION & ADVANCED WORKFLOWS

2.1 Customization & Extensibility:

- Custom Objects & Fields: Unlimited custom objects (within storage limit), unlimited custom fields per object (recommended <300 for performance), formula fields with cross-object logic, roll-up summaries.
- Page Layouts & Roles: Unlimited role hierarchies, 20 profiles included, permission sets, field-level security, record-level sharing rules (owner-based, criteria-based).
- Advanced Automation Engine: 150 active flows included, 50 approval processes, 10 scheduled batch jobs (nightly). Event-driven architecture with 2,000 automation executions per user/month pooled, plus time-based

& platform event triggers.

- Low-Code: Canvas app builder, process orchestrator with parallel branches, sub-flow calls, and error handling paths.

2.2 AI & Predictive Capabilities:

- ClientCore IQ (Included): Generative AI for email, proposal & lease renewal drafts; Conversation Intelligence (call recording, transcription, sentiment & talk-time analytics); Predictive Lead & Churn Scoring (ML trained on 90 days tenant activity); Anomaly detection for rent delinquency.

- AI Credits: 5,000 AI credits/month pooled (email draft = 1 credit, call intel = 5 credits, predictive scoring = 2 credits/batch of 100).

- Digital Engagement: Omnichannel inbox (email, SMS, web chat, WhatsApp), AI chatbot with 15 playbooks, intent routing, knowledge base with generative answers.

PAGE 3: INTEGRATIONS, MIGRATION & INTERCONNECTION MANAGEMENT

3.1 Integration & Interconnection Management:

- Interconnection Path: Pre-built native connectors for Gmail, Outlook 365, QuickBooks Online & Desktop, AppFolio, Buildium, Yardi (via SFTP + API), Stripe & Plaid for payments, DocuSign & native e-sign, Slack, Teams.

- Interoperability: 250,000 API calls/day included, 100 webhooks, bi-directional real-time sync, middleware layer (Meridian Connect) for legacy SOAP APIs to avoid overseas queue delays.

- Communication: Native VoIP with call recording & local presence dialing (unlimited inbound, 3,000 outbound mins/mo included at \$0.025 overage), SMS (5,000/mo included, \$0.015 thereafter), bulk email 50,000/mo via dedicated IP (with deliverability monitoring).

- Queue Mitigation: Meridian provides interconnection delay guarantee for third-party integrations - if AppFolio/QuickBooks API connector deployment exceeds 45 days beyond baseline, Meridian absorbs integration labor costs.

3.2 Serviceability & Supportability:

- Centralized Architecture: Factory-tested integration adapters with centralized monitoring dashboard; technicians can perform rapid component-level servicing within climate-controlled cloud environment (zero-downtime rolling updates).

- Spares & Support: 24/7 remote NOC monitoring with predictive failure analytics for sync jobs included for 3 years. On-demand integration health check.

PAGE 4: PERFORMANCE, SECURITY & TARIFF ARBITRAGE

4.1 Energy / Performance Yield & Degradation Metrics:

- Year 1 Estimated Productivity Yield: 18% reduction in leasing admin time (equivalent to ~3,780 hours/year reclaimed) due to canopy-style automation tilt optimization (15-degree tilt on approval workflows and bulk actions).
- Degradation Rate: Guaranteed performance degradation not to exceed 0.50% per year in automation execution latency through Year 5 (with quarterly performance tuning).
- DC/AC Ratio Analogy: 1.28:1 effective license utilization ratio with optimized clipping management software to capture shoulder-hour after-hours automation without per-execution overage.

4.2 Tariff Arbitrage & Resiliency (Cost Optimization):

- Peak Shaving / Cost Avoidance: Programmable license pooling & storage tiering tied directly to facility sub-meter telemetry (usage analytics). Automated downgrade of inactive users after 30 days.
- Microgrid Capability Analogy: Black-start functionality included to power critical administrative loads during grid outages = offline continuity mode: mobile offline queue with 72-hour sync buffer, plus emergency admin portal accessible during Azure regional outage via secondary region failover.
- Data Retention: 7-year audit log retention included for compliance (vs 90 days standard).

4.3 Security & Compliance:

- Auth: SSO (SAML 2.0, OIDC) with Azure AD, Okta, Google, enforced MFA, adaptive risk-based authentication, IP & device policies (unlimited ranges).
- Compliance: SOC 2 Type II, ISO 27001, GDPR, CCPA, HIPAA-ready with BAA included at no extra cost, 7-year immutable WORM-compliant audit vault.
- Encryption: AES-256 at rest with customer-managed key (CMK) option, TLS 1.3, HSM-backed key vault.

PAGE 5: FINANCIAL INVESTMENT SUMMARY & WARRANTIES

5.1 Project Investment & Schedule:

- Total Turnkey Cost: \$42,800 Year 1 (Fully inclusive of licensing, implementation, data migration, 2 custom portals, CPQ setup, advanced training, and commissioning).
Breakdown: Subscription \$34,800/year (\$103.57/user/mo avg for 28 users with burst to 40) billed annually, Implementation \$8,000 one-time.
- Deployment Timeline: 8 weeks from contract execution (Week 1-2 Discovery & Architecture, Week 3-4 Build & Integration, Week 5-6 Migration & Portal Build, Week 7 UAT, Week 8 Go-Live & Hypercare).
- Warranty Structure: 12-month comprehensive turnkey warranty covering all defects in materials and workmanship of configuration; 5-year module warranty (core updates included); 3-year capacity retention warranty (70% performance retention at Year 3 for automations).
- Price Protection: 5% max annual uplift for 3 years, contract includes license true-up protection.
- Cancellation & SLA: 99.95% uptime SLA with 25% service credit tier; early termination after 120 days with 50% of remaining term fee.
