VCRSoft Consultation Transcript

Company: Bennett Wealth Partners

Business type: Financial Advisory Firm

Engagement: 1

VCRSoft

Hi Michael Bennett — I'm an AI consultant that can help you leverage AI tools and solutions to grow Bennett Wealth Partners. To understand the firm, what is your regulatory and operating model (for example, an SEC- or state-registered investment adviser, broker-dealer, hybrid, financial-planning-only practice, or another model), how many advisors and support staff do you have, what services do you provide, and which client segments do you serve?

YOU — Turn 1

We're an independent, fee-only fiduciary RIA, registered with the SEC — not a broker-dealer, no commissions, no broker-dealer affiliation. I'm the founder and CEO, and we have 10 people total: me plus three other advisers — Sarah Chen, David Okafor and Emily Ross — three client service associates, our operations manager Karen Doyle, Rachel Torres who handles compliance, and one admin. We do discretionary investment management and financial planning, plus some 401(k) consulting. Our clients are mostly affluent professionals, business owners, executives and retirees — about 520 households, roughly $650 million under management, typical client in the $1–5 million range.

VCRSoft

With 520 households representing about $650 million under management across four advisors, your average household scale sits around $1.25 million. What is your approximate annual revenue, or what average advisory fee rate do you charge across those accounts?

YOU — Turn 2

Revenue is about $4.6 million a year. Our average advisory fee is around 0.70% — roughly 0.85% on the first $1 million, 0.65% on the next $4 million, and 0.50% above $5 million. About 94% of revenue is advisory fees, around $4.32 million, with roughly $180k in standalone planning fees and about $100k in other work like 401(k) consulting.

VCRSoft

With advisory fee revenue share percentage coming in at 94% of your $4.6 million annual revenue, your core asset management engine carries the firm while planning and consulting provide a solid supplemental base. What is your primary growth objective for Bennett Wealth Partners, what measurable target would represent success, and by when?

YOU — Turn 3

Grow revenue 10 to 15 percent a year — to about $5.2 to $5.3 million in the next 12 months. That means taking AUM from $650 million to about $730 million, and profit from roughly $900,000 to about $1.15 million. And I want to do it without hiring at the same rate — at most one or two hires. I also want to increase the value of the firm and reduce how dependent it is on me day to day.

VCRSoft

With target revenue increase midpoint of $650,000, target AUM increase of $80,000,000, and target profit increase of $250,000 over the next 12 months while keeping headcount expansion limited to at most one or two hires, new business must flow smoothly through your existing team without creating operational bottlenecks. How does a prospect typically find Bennett Wealth Partners, and what steps do they go through

from initial contact to becoming a signed, funded advisory client?

YOU — Turn 4

Mostly referrals — about 65% of new clients. Existing clients account for roughly 45% and centres of influence like CPAs and attorneys about 20%. The website brings in about 10%, the rest is miscellaneous. The journey is: discovery meeting, then a proposal, then the agreement on DocuSign, Schwab account opening, asset transfer — ACATS, usually 7 to 14 days — then the eMoney data gathering and finally getting them invested. All told it takes 3 to 5 weeks from signed agreement to fully funded, and prospects have to give us the same information more than once — Wealthbox, then Orion, then the Schwab forms, then eMoney. About 15% stall beyond 60 days or drop out. On a monthly average we get about 10 qualified inquiries, about 6 discovery meetings, and about 2.3 new clients — so roughly 28 a year.

VCRSoft

With 28 new client households added annually, your acquisition funnel and onboarding process feed accounts into a team that already manages 520 households across four advisors. Across your four advisors, three client service associates, and operations manager, how is ongoing client service distributed, and which part of your annual review cycles, planning work, or account maintenance places the heaviest operational demand on your team today?

YOU — Turn 5

The advisers own the relationships and the review meetings; the associates handle a lot of the day-to-day client contact and document chasing; Karen runs the operations side. The heaviest load by far is preparing for review meetings — about 600 a year, annual for most households and semi-annual for the top 100 or so, and each one takes about two and a half hours of adviser and associate time. Pulling the Orion reports is about 45 minutes, updating eMoney about 40, the agenda and notes about 30, and follow-up tasks about 35. On top of that each adviser gets roughly 25 inbound emails or calls a week, and about 40% of those are routine — balances, distributions, tax documents, passwords, scheduling. Billing is quarterly in arrears through Orion, and reconciling it takes about three hours a month.

VCRSoft

With 1,500 total annual review meeting preparation and execution hours and 10 routine inbound communications per advisor per week, client service and review obligations absorb substantial advisor and associate capacity across your 520 households. Which client segments are most profitable after advisor and staff time, service complexity, platform costs, and acquisition effort—and do you measure service hours or profitability at the household level?

YOU — Turn 6

Honestly, no — we don't measure service hours or profitability at the household level, and that's part of the problem. We have no clear service-tier model matching service intensity to client profitability. What I do know is the top 20% of households generate about 55% of our revenue, yet they get roughly the same service cadence as a $1 million household. My sense is business owners and executives near retirement are our most profitable — larger balances, more planning work that we're paid for — but that's a sense, not a measured number. We've talked about specialising more, in business owners or physicians and dentists, but we haven't settled on a target market.

VCRSoft

Your top 20% of households generate about 55% of your revenue while receiving the same service cadence as a $1 million household, yet your team spends 1,500 hours annually preparing for about 600 review meetings. What specific high-touch deliverables or planning services do your top 20% revenue households expect that distinguish their relationship from a standard $1 million household?

YOU — Turn 7

Frankly, not much distinguishes them today — that's the gap I just described. The top 100 or so do get semi-annual reviews instead of annual, and they tend to get more direct access to me or their adviser, but we don't package distinct high-touch deliverables for them. What they expect — and what we do informally — is proactive tax planning around year-end, coordination with their estate attorney or CPA, and someone picking up the phone when something changes in their life. But it's ad hoc, not a defined service tier.

VCRSoft

With 15% of onboarding prospects stalling beyond 60 days while duplicate data entry is required across Wealthbox, Orion, Schwab forms, and eMoney, acquisition effort is being lost right at the conversion finish line. What specific compliance or custodian form requirements prevent you from pre-populating Schwab account paperwork and eMoney profiles from your existing CRM data during onboarding?

YOU — Turn 8

To be honest, I don't think there's a specific rule that prohibits pre-populating. The Schwab paperwork still needs the client to review, sign and attest to it, and the eMoney profile needs data the client provides directly — we can't just push CRM data in and treat it as verified. The bigger problem is the systems simply aren't integrated: Wealthbox, Orion, Schwab and eMoney don't talk to each other, so my team re-enters the same information by hand. The longest delays are the asset transfers and clients gathering their documents, not a form rule. I'd need Rachel, our compliance person, to verify the exact requirements before we changed anything here.

VCRSoft

Operating across Wealthbox, Orion, Schwab, and eMoney without system integration forces manual data re-entry that slows your 15% stalling onboarding prospects, while unmeasured service tiers across your 520 households consume 1,500 annual review preparation hours without differentiating your top 20% revenue clients. WORKING DIAGNOSIS: Bennett Wealth Partners is constrained by administrative and review preparation bottlenecks consuming 1,500 annual hours, which limits senior advisor capacity to scale AUM to $730 million and profit to $1.15 million without adding headcount. Does this match your experience, and what part of the diagnosis or constraints am I missing?

YOU — Turn 9

Mostly, yes — the admin and meeting-prep load is real, and it does eat adviser capacity. But it's only part of it. The other half is on the front end: about 30% of prospects go cold after the first meeting and we have no systematic follow-up beyond one or two emails, so we're losing people we already spent time with. And there's the compliance side — we have no approved AI policy, no approved-vendor list and no logging, so I can't just throw AI at the admin problem without creating a regulatory risk. The other constraint is key-person dependence: Karen knows how operations work and Rachel knows compliance, and if either were out, we'd feel it fast.

VCRSoft

With 30% of your discovery meetings going cold without systematic follow-up alongside 1,500 annual review hours, relying on advisors to salvage those prospects is impossible without carving into their existing client commitments. Which specific role or team member would be responsible for executing systematic follow-ups with the 30% of prospects who go cold after the first discovery meeting?

YOU — Turn 10

Nobody owns it today — that's exactly the problem. The adviser sends one or two emails and then moves on to the next client. If we built a proper process, I'd put one of the client service associates on it, overseen by Karen, with the adviser approving anything that goes out. But right now there is no owner and no system, just good intentions.

VCRSoft

With 30% of discovery meetings going cold while advisors are at capacity with 1,500 annual review hours, assigning prospect follow-up to a client service associate under Karen's oversight creates a clean front-end process, but deploying tools to solve your 1,500-hour review preparation load depends directly on your compliance constraints. What formal review process and timeline does Rachel require to approve an internal, non-client-facing data aggregation or meeting preparation template tool?

YOU — Turn 11

Honestly, there isn't a formal, written approval process or timeline for a tool like that today — that's part of why I'm cautious. What would have to happen is Rachel would review the vendor, how client data is handled and retained, whether anything needs archiving, and whether it fits our written policies. Our vendor due diligence is informal right now — questionnaires for major vendors, no formal scoring — and I approve any AI tool that touches client data. I can't give you a firm timeline; Rachel would have to verify the exact steps. My guess is weeks rather than days, but that's a guess.

VCRSoft

Operations depend heavily on Karen and compliance on Rachel while you target $730 million in AUM and $1.15 million in profit with at most one or two new hires. What documented standard operating procedures or cross-training arrangements currently exist to back up Karen in operations and Rachel in compliance during an extended absence?

YOU — Turn 12

Very little, honestly. We have written compliance policies and procedures, but not documented step-by-step operating procedures for what Karen does, and no real cross-training. Karen has been with us 11 years and just knows how things work; Rachel has been here five years and owns compliance. If either were out for an extended period we'd struggle — other staff could cover pieces, but nobody could step straight into their roles. It's a risk I've been aware of and haven't fixed.

VCRSoft

With Karen holding 11 years of institutional knowledge and Rachel managing compliance without documented step-by-step backup, operational resilience compounds the admin and front-end bottlenecks holding back your 1,500 review hours. What happens in terms of quality control or client communication if an advisor uses a prep template incorrectly during one of your 600 annual reviews?

YOU — Turn 13

The adviser is responsible — any template output is a draft, and the adviser has to verify the numbers against Orion and eMoney before it goes to a client. If wrong figures went out, that's a serious problem: it undermines trust, and if anything were misleading it could be a compliance issue. Today there's no dedicated quality-control step for prep materials beyond that. I sample adviser communications and Rachel reviews archived email, but nothing specifically checks a prep packet before the meeting. That's a gap we'd need to close before relying on templates.

VCRSoft

Advisers verifying template drafts against Orion and eMoney protects accuracy, but doing so manually for 600 reviews preserves the exact admin bottleneck holding back your growth target. What specifically does it cost the firm in adviser hours or lost review capacity when prep packets are built manually without standardized templates today?

YOU — Turn 14

The arithmetic is straightforward: 600 meetings a year at about two and a half hours each is roughly 1,500 hours of adviser and associate time. I don't have a clean dollar cost per hour for that, but the opportunity cost is obvious — that time comes out of prospect follow-up and business development. I'm working about 50 hours a week now, roughly 20 client-facing, 15 on management, 10 on business development and 5 on

admin, and I'd like to be at 40. When prep eats the week, the follow-up and the growth work are what get squeezed.

VCRSoft

With 30% of discovery meetings stalling after the initial conversation and zero follow-up ownership beyond a couple of adviser emails, the firm is leaking roughly three potential new client households every month before they even reach onboarding. Roughly how many prospective client discovery meetings does the firm hold each month, and what is the estimated financial value of the prospects who go cold before proposing?

YOU — Turn 15

We hold about six discovery meetings a month, so 30% going cold is roughly 1.8 prospects a month — call it two, not three. At an average household of about $1.25 million and a 0.70% fee, each one is worth roughly $8,750 a year in advisory fees, so a month's cold prospects are worth on the order of $15,000 to $16,000 a year if they had all signed — though in reality not all of them would have, since only about 38% of meetings convert. Over a year that's roughly 20 households going cold, so the realistic lost value is a meaningful number, but I'd want to be careful not to count every cold prospect as a signed client.

VCRSoft

With roughly 20 households going cold annually and a 38% discovery conversion rate, the pipeline leak represents meaningful lost fee revenue that compounds year over year while advisors are tied up in manual review preparation. What specific triggers or timing milestones should govern when a client service associate initiates follow-up with a prospect who has gone cold after their first discovery meeting?

YOU — Turn 16

There is no rule today, so this would be a new process — here's what I'd want. First, every inquiry gets a response within one business day. After a discovery meeting, if no next step is booked, the associate checks in within two or three business days. If there's still no reply, a second touch around a week later, then another at about two weeks, and after that they go into a light quarterly nurture — something useful, not pestering. The trigger is simple: no booked next step within three business days of the meeting. And the adviser has to approve anything that goes out — the associate shouldn't be freelancing client communications.

VCRSoft

A three-day trigger with associate check-ins and advisor oversight establishes a clean cadence for pipeline recovery, closing the front-end leak while preserving client-facing standards. What specific workflow or reporting steps consume the most time within the two-and-a-half-hour preparation window for each of your 600 annual review meetings?

YOU — Turn 17

As I mentioned earlier, the breakdown is roughly: pulling the Orion reports, about 45 minutes — that's the biggest single chunk; updating eMoney, about 40 minutes; the agenda and notes, about 30 minutes; and follow-up tasks, about 35 minutes. The Orion pull and the eMoney update are the painful ones, because neither is automated and both involve re-checking figures by hand.

VCRSoft

With Orion and eMoney updates consuming 85 minutes per meeting across 600 annual reviews, what specific data discrepancies or reconciliation errors commonly occur during that manual process that require your advisors or associates to re-verify figures by hand?

YOU — Turn 18

The usual ones are stale planning data — eMoney only has a current plan for about 70% of households, the rest are stale by more than two years or have no plan at all — and balances or holdings that differ between

Orion and Schwab after a transfer or a trade hasn't settled the same way. Billing reconciliation catches small differences too, about three hours a month. I don't track a measured error rate or a count of discrepancies per meeting, so I can't give you a precise figure — the re-checking is exactly how we catch them before a client sees them.

VCRSoft

With 30% of households lacking current eMoney plans and Schwab-Orion settlement discrepancies requiring manual verification across 600 annual reviews, administrative rework directly limits the firm's advisory capacity. What is the primary reason the 15% of onboarding prospects stall beyond 60 days—is it client delay in gathering documents, or internal delays in processing paperwork?

YOU — Turn 19

Both play a part, but the primary reason is on the client side — gathering documents and the asset transfers. ACATS alone runs 7 to 14 days, and clients take their time pulling statements and paperwork together. Our side doesn't help: because we re-enter the same information across Wealthbox, Orion, Schwab and eMoney, processing is slower than it should be, and there's nobody chasing a stalled file systematically. So I'd say roughly two-thirds client delay, one-third our own slowness.

VCRSoft

With two-thirds of onboarding stalls driven by client gathering delays and ACATS transfer windows compounded by manual re-entry across systems, administrative drag touches both front-end onboarding and back-end review preparation. What specific operational metrics or feedback channels do you currently use to track client satisfaction across your 520 households, and how do you identify clients at risk of leaving before they give notice?

YOU — Turn 20

We don't have one — no satisfaction survey, no early-warning system, no metric I track. We usually find out a client is unhappy when they go quiet or ask for a transfer, which is far too late. Churn runs about 2.3% a year, roughly 12 households, mostly death, relocation, divorce or fee sensitivity. I'd like to spot at-risk clients earlier, but today it's down to each adviser's feel for their relationships.

VCRSoft

With review meeting preparation taking 1,500 annual hours and manual data verification required across Orion and eMoney to catch discrepancies, how would you measure the success of a streamlined prep workflow, and what level of investment in time or third-party tools would be acceptable to cut prep time in half without increasing compliance risk?

YOU — Turn 21

I'd measure it plainly: meeting prep from two and a half hours down to under an hour and a half, measured weekly by Karen from our Wealthbox and Orion reports — and with no increase in errors, because the adviser still verifies every figure before it goes to a client. On investment, my budget for improvements overall is roughly $4,000 to $6,000 a month in operating cost plus up to about $15,000 one-time setup, and I want payback within 9 to 12 months. Karen would be the implementer, about eight hours a week. I won't spend more than that on an unproven tool — I'd want a pilot first.

VCRSoft

With an operating budget of $4,000 to $6,000 monthly, an implementation owner in Karen dedicating eight hours a week, and a clear requirement for a pilot before any unproven tool touches client data, your operational parameters for investing in growth and efficiency are firmly established. What specific workflow or tracking tool would you expect Karen to use for the follow-up sequence on the 20 households that go cold each year?

YOU — Turn 22

Wealthbox — our CRM, which we already pay about $18,000 a year for. I don't want a new tool for this. I'd want a prospect pipeline in Wealthbox with a stage for each prospect, dated follow-up tasks for the associate, and a weekly report Karen can run showing who's overdue. If Wealthbox can't do that cleanly, tell me — but buying another tracker on top of a CRM we already own would be hard to justify.

VCRSoft

Leveraging Wealthbox for pipeline tracking avoids adding software bloat while directly capturing the roughly $15,000 in monthly lost fee value from stalled prospects. What specific stages and automation rules should Karen set up in Wealthbox to ensure associates execute the multi-touch follow-up sequence without missing the three-day discovery window?

YOU — Turn 23

Stages I'd want: new inquiry, discovery booked, discovery held, proposal sent, follow-up, nurture, then won or lost. The rules: when a discovery is marked held with no next step booked, Wealthbox creates a follow-up task due in three business days, assigned to the associate. If it's not done by the due date, it escalates to Karen's list — nothing should just sit. A second task fires a week after that, a third two weeks after, and then the prospect moves to quarterly nurture. Nothing goes out without the adviser approving it first. One correction, though: that $15,000 figure I gave was annual fee value per month's worth of cold prospects, not $15,000 a month lost — I don't want that overstated.

VCRSoft

Correcting the fee value calculation confirms that your stalled pipeline represents roughly $1,250 in monthly recurring fee potential—or about $15,000 in annualised fee value per month of cold prospects—making systematic Wealthbox task automation a high-return operational fix. What specific pre-packaged meeting template or report builder features in Orion or eMoney would Karen need to test in a pilot to cut your review preparation time from two and a half hours down to under an hour and a half without increasing compliance risk?

YOU — Turn 24

I don't know the exact feature names in Orion and eMoney — Karen is the one who lives in those systems, and she'd have to test what's actually in our licences. What I'd want her to test is a standard pre-built review packet in Orion — performance, holdings, allocation and billing in one pull instead of assembling it by hand — and in eMoney a planning summary or plan-update snapshot she can drop in. Plus a standard agenda template. But I'd want her to confirm whether those features are included in what we already pay for, or whether they're an add-on, before I agree to anything.

VCRSoft

Karen verifying Orion single-pull reporting and eMoney snapshot features within your existing licences lets us test the 1,500-hour review bottleneck without adding software costs. Who must review or approve Karen's pilot review prep packet before an adviser uses it with a client, and what specific steps are required to ensure no errors reach the meeting?

YOU — Turn 25

Three people, in order. Karen builds the packet. The adviser who owns the meeting reviews it and verifies every figure against Orion and eMoney — that's the real control, and nothing goes to a client without the adviser's sign-off. I approve the pilot itself. Rachel needs to confirm the recordkeeping side — that the packet and any drafts are retained properly. The steps are simple: a checklist the adviser initials, a spot-check of the key figures, and the final packet saved in the client file. If the adviser won't sign it, it doesn't go out.

VCRSoft

With a three-step sign-off process led by Karen, verified by the advisor, and checked by Rachel for recordkeeping, your pilot guardrails protect client accuracy while targeting the 1,500 review preparation hours. What specific operational bottlenecks or manual re-entry steps across Wealthbox, Orion, Schwab, and eMoney cause the remaining one-third of onboarding delays after client-side document gathering?

YOU — Turn 26

It's the same information typed four times. The prospect's details go into Wealthbox at intake, then someone re-enters them in Orion to set up the portfolio and billing, then again on the Schwab account-opening forms — names, addresses, beneficiaries, funding instructions — and then again into eMoney for the financial plan, including accounts and holdings. There's no link between any of those steps, so if something changes mid-process it has to be corrected in each place by hand. Nobody chases a stalled file, either, so a transfer sitting in ACATS or a missing form just waits until someone notices.

VCRSoft

Manual re-entry across Wealthbox, Orion, Schwab, and eMoney turns onboarding into a four-step typing exercise where changes propagate by hand and stalled files wait for chance discovery. What specific oversight or verification steps does Rachel require before allowing any streamlined pre-population method between Wealthbox, Orion, or Schwab account paperwork?

YOU — Turn 27

I can't list a formal checklist, because one doesn't exist yet — Rachel would have to define it before we did anything like this. What I'd expect her to require is: the client reviews and verifies every pre-filled field before signing, nothing is changed after the client attests to it, there's an audit trail of where the data came from, and the completed forms are archived properly. She'd also want the vendor arrangement reviewed. But the exact steps are hers to set — I've said twice now that I'd need her to verify the requirements, and that hasn't changed.

VCRSoft

With 15% of onboarding accounts stalling and duplicate typing required across four unintegrated systems, administrative friction is compounding our onboarding bottlenecks. What specific workflow or reporting change could Karen introduce to track stalled onboarding files so they don't sit waiting for chance discovery?

YOU — Turn 28

A simple onboarding pipeline in Wealthbox, same idea as the prospect one: agreement signed, account opened, transfer in progress, funded and invested — with a date on each stage and an age in days. Karen runs a weekly report of every file that hasn't moved in seven days, and she chases it: calls the client for missing documents, checks the ACATS status with Schwab, or nudges whoever owns the next step. Nothing should sit for three weeks without someone knowing why. It's not a new system — it's a report and a weekly habit.

VCRSoft

A weekly tracking habit led by Karen in Wealthbox turns onboarding from a passive waiting game into an accountable pipeline without adding software bloat. What measurable change within 90 days would you need to see to continue an initiative, and who would measure it?

YOU — Turn 29

In 90 days I'd want to see: prospect follow-up within one business day for 95% of inquiries; onboarding down from three to five weeks to under three weeks median; meeting prep from two and a half hours to under an hour and a half; routine inquiries answered with drafted responses that a human approved; and a written AI-use policy with an approved-tool list and a usage log actually in place. Karen would measure it weekly from Wealthbox and Orion reports, and I'd review it with her. If those numbers don't move, we stop.

VCRSoft

Targeting 90-day operational thresholds with Karen measuring weekly and hard stop-safeguards in place establishes accountability without expanding headcount. What client confidentiality, privilege, contractual, licensing, or professional obligations limit how client information can be processed or used with AI tools?

YOU — Turn 30

Several. As a fiduciary RIA we owe clients confidentiality and a duty to protect their non-public personal information — the SEC privacy rules apply, and our client agreements promise that. Our custodian arrangements with Schwab, where about 95% of our assets sit, and our vendor contracts limit how data can be shared. Anything that goes out has recordkeeping requirements — our communications are archived through Smarsh — so if an AI tool touches client communications, the output has to be retained properly. And we can't put client financial information into public AI services: no uploading client data into ChatGPT or similar tools. I'm also unsure whether the Zoom AI Companion meeting summaries are being archived correctly, which worries me. There's no attorney-client privilege here — we're advisers, not lawyers — but the fiduciary and privacy obligations are the binding ones.

VCRSoft

Fiduciary privacy obligations, strict SEC confidentiality rules, and custodian restrictions on 95% of assets at Schwab mean client financial data cannot enter public AI tools like ChatGPT, and tools like Zoom AI Companion require verified archiving through Smarsh to meet compliance standards. Does this order match your priorities, and what would you change?

YOU — Turn 31

I have to be honest — I haven't actually seen a ranked order in this conversation to match against. If you're referring to a list, it hasn't appeared on my screen. Here's my order, clearly: first, improve how we follow up with qualified prospects and turn more of them into clients. Second, streamline onboarding and reduce all the manual work my team does. Third, a practical and defensible framework for using AI safely in the firm. If that's the order you had in mind, then yes, it matches — but the AI-governance piece is a precondition for the other two, not an afterthought, because without it I can't let the team use these tools at all.

VCRSoft

Establishing an approved AI governance framework and vendor list first directly unblocks secure workflow automation while protecting non-public personal information under SEC privacy rules and Smarsh archiving. Within your operating budget of $4,000 to $6,000 a month and Karen's eight weekly hours, what specific secure tools or workflow areas would you want Rachel and Karen to evaluate first under that AI framework?

YOU — Turn 32

Three, in this order. First, our Microsoft Copilot — it's already bundled in what we pay for — evaluated as an internal drafting tool only: routine inquiry replies and meeting-prep summaries, always human-approved before anything reaches a client, with no client financial data going to any public service. Second, the Wealthbox workflow automation we already own, for the prospect follow-up and onboarding pipelines. Third, the Zoom AI Companion summaries — Rachel needs to verify whether those meeting summaries are being archived correctly before we keep using them. All three get the same test: vendor review, data handling, retention and archiving, and a usage log.

VCRSoft

Microsoft Copilot drafting routines and Wealthbox workflow automation leverage existing licences to protect non-public personal information while supporting your 90-day targets. How many households or relationships does each advisor serve, how is time divided among planning, reviews, investment work, client service, business development, and administration, and where is usable capacity actually constrained?

YOU — Turn 33

Four advisers including me serve about 520 households, so roughly 130 households each, though mine skews larger and more complex. For my own week, I track it: about 50 hours, roughly 20 client-facing, 15 on management, 10 on business development and 5 on admin — I want to get to 40 hours total. I don't have a precise time diary for Sarah, David and Emily, but their weeks are dominated by review meetings and prep — that 2.5 hours per meeting across 600 meetings — plus about 25 inbound client emails or calls each per week, 40% of them routine. The constraint is usable adviser hours: prep and routine inquiries eat the time that would otherwise go to new clients and follow-up. We have no slack to take on meaningfully more households without freeing those hours first.

VCRSoft

With 130 households per advisor and 520 households total, advisors are at capacity with review preparation and routine inbound requests, leaving client retention and net asset flows vulnerable to unmanaged churn. How many households leave or reduce assets in a typical year, why do they leave, and how do you distinguish client attrition and net flows from market appreciation, withdrawals, or transfers?

YOU — Turn 34

About 12 households a year leave — roughly 2.3% churn — mostly death, relocation, divorce or fee sensitivity. We don't have a formal attrition dashboard, so I can't break out how many reduce assets without leaving. On flows: net new assets run about $35 million a year, and the rest of our AUM growth — $520 million three years ago, $580 million two years ago, $650 million now — is market appreciation. Orion separates flows from market movement in its reporting, so contributions, withdrawals and transfers are tracked separately from performance. But I'll be straight with you: I look at those numbers periodically, I don't manage to a monthly net-flows report.

VCRSoft

Thanks — I have prepared a draft of your growth strategy report. Please review it, and tell me what you would change, correct, or push back on before I finalize it.

DRAFT FEEDBACK

[Draft feedback] Good diagnosis overall, and the Top 3 order is right — governance first as a precondition, then follow-up, then prep. But several figures and points need fixing before I approve:

1. The 'Figure to verify' flag on the 10-person team is wrong and should be removed. The team is exactly 10: me, three other advisers, three client service associates, Karen Doyle, Rachel Torres, and one admin. 'Four advisers total' is the same count — me plus the three others. The figure is correct; the flag is the error.

2. The $71,820 in Top 3 #2 needs its working shown or removing. What I actually said: about 1.8 prospects a month go cold (roughly 20 a year), each worth about $8,750 a year in fees, and only about 38% would ever have converted. $71,820 doesn't match anything I said, and it contradicts the $15,000 annualised figure in the follow-up opportunity. Pick one consistent figure with the maths shown, and state plainly that it is annualised recurring fee value — not first-year revenue. A client who signs late in the year brings in only a fraction of that in year one.

3. The funnel arithmetic is wrong in the Sales & Growth Engine section: six meetings a month at 38% is about 2.3 new clients a month (about 28 a year), not 2.8. And 38% is meeting-to-client, not meeting-to-proposal.

4. Remove the stray words 'or not established' from the follow-up opportunity's 'Why it matters' — it reads like an internal note left in the report.

5. The report states the $650M to $730M AUM target but never reconciles it: show how $35M a year of net new assets, plus recovered prospects, plus market appreciation, bridge to the $80M gap.

6. The top 20% of households generating 55% of revenue is buried as a one-line note. That is my clearest profitability lever — make differentiated service tiers a real opportunity, or explain why you are not recommending it.

7. Onboarding stall reduction was my second priority, yet the Top 3 has review-prep streamlining instead, with onboarding only as opportunity 4. Either promote onboarding into the Top 3 or explain why prep outranks it.
